**IgM dog**

ANTISERUM: ICN (Cappel) (55313). Goat anti canine IgM (: chain).

REAKTIVITY ACCORDING TO MANUFACTURER:
- By immunoelectrophoresis this antibody does not cross-react with other canine immunoglobulins. Cross-reactivity to other species may exist.

STAINING PROCEDURE ACCORDING TO MANUFACTURER:

WORKING DILUTION: 1/6,000. Pretreatment with steamer (citrate buffer, pH 6.0).

METHOD: LSAB+ /PO. 30 min. RT.

CELLS/TISSUES STAINED (canine tissues unless specified):
- Lymph node: Stains strongly individual cells in lymphoid follicles and medulla and less strongly (membrane?) numerous follicular cells.
- Spleen: Fewer stained cells in red pulp.
