Extra Credit for EAS 116 – Earthquakes and Volcanoes

EAS116 students are welcome to attend EAS departmental seminars that are relevant to Earthquakes and Volcanoes. These are a good chance to see what are currently the hot topics in Earth science research. They are usually presented at a level above undergraduate, but it can still be very interesting to go and try to pick up on the general ideas of the talk.

This semester there is one scheduled talk of interest:
Oct 15, 2009 3:30 pm CIVL 1252 Prof Alessandro Forte, General Topic: Earthquakes

I will keep you informed of other departmental seminars of interest if more are scheduled. To receive extra credit of 4 points for any individual seminar, the student is responsible for obtaining the signature of the Seminar Host (the faculty member who introduces the speaker) following the presentation as evidence they were present, and turning in a one page write-up. The writeup should summarize 1) the speaker’s scientific hypothesis 2) the main observations or facts supporting the hypothesis 3) the conclusions 4) a description of why a person working in the career you have chosen might be interested in this topic, and 5) the speaker’s Name, affiliation, and background. It should be turned in to the TA by 5pm the day following the seminar.

The seminar schedules can be found at:

Keep your eye out for other departmental seminars posted on the wall in front of the EAS office 2169.

Seminars are usually held in Room CIVL 1252 Thursday afternoon 3:30 to 4:30
